

LEAK DETECTION POWDERS

LEAK DETECTION POWDERS AVAILABLE IN YELLOW, PINK GREEN & ORANGE

Features & Benefits

LEAK DETECTION POWDER is an aid in finding those troublesome leaks in your baghouse. When you inject the leak detection powder into your baghouse inlet, the powder travels throughout the baghouse, making the leaking area visible when you use a black light. The faulty area shows up as a bright colored powder marking.

FORMULA - For leak powder quantities - using inches for measuring diameter and length: diameter of bag X 3.14 X length of bag X quantity of bags, 144 = total sq. ft. of filter cloth area. 1 lb. of leak detection powder per 1000 sq ft of filter cloth is required to perform the leak detection test, so total sq. ft. of filter cloth area, 1000 = lbs of Leak Detection Powder needed.
